JUNCKERS.COM

Dimension

22 mm x 129 mm (thickness x width)

Grade

GYMFLEX

This grade has a natural look with more colour and more structural graining variation between the staves. Sound medium sized black knots and knots on edges of boards. Hairline splits; individual and in groups, red heartwood and inbark. Minor voids in the surface of the wood. Knots and other features are factory filled with one colour filler. Ideal for all multi-purpose sports floor use.

About the floor

Beech is one of Europe's most common hardwood species and the excellent strength properties, the uniform structure with white to reddish sapwood and the red-brown grain pattern provide a hard-wearing floor very suitable for all types of sport and dance activities.

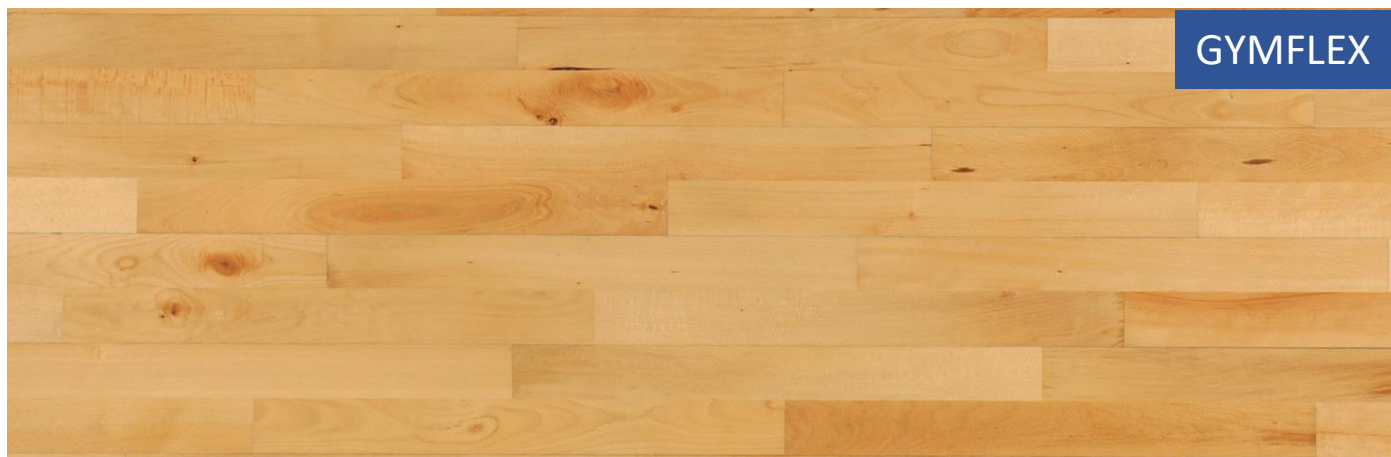

Junckers solid hardwood sports flooring is produced and categorized in accordance with EN 13629, EN 14904 and Junckers own factory standard. The floors are made exclusively from solid hardwood and the image illustrates the colour, knots and structural graining variation characteristic for the specific wood species and grade.

The image shows the average appearance of the grade. It is normal to see a variation in appearance between individual floor boards, staves and floors produced and installed at differing times.

Up to 5% of the staves may contain features of the next grade.

Hardwood floors may fade and change colour over time, especially when exposed directly to sunlight.

BEECH GYMFLEX STRIPBOARD | GRADE

GYMFLEX

The actual colour on a wooden floor can vary from the colour shown in this style chart. This is due to the fact that colours are very difficult to reproduce online and in printed material. Junckers accepts no liability to discrepancies and we always recommend ordering a physical sample before placing an order.
